SUMMARY

Aspiring Software Engineer with strong foundations in Python, Data Structures, Algorithms, backend development, and system design fundamentals. Experienced in building scalable APIs and AI-powered applications using FastAPI, PostgreSQL, and cloud tools. Passionate about problem-solving, backend engineering, and leveraging AI tools to accelerate debugging, development, and learning.

EDUCATION

Bachelor of Technology in Computer Science | 2022 – 2026

Swarnandhra College of Engineering & Technology | **CGPA:** 8.74 / 10

TECHNICAL SKILLS

- **Programming:** Python, SQL, JavaScript
- **Frontend:** React.js, HTML, CSS, Streamlit
- **Backend:** FastAPI, Flask, REST APIs, JWT Authentication
- **Databases:** PostgreSQL, MySQL, MongoDB
- **AI & ML:** Scikit-learn, Pandas, NumPy, NLP, Prompt Engineering, AI Agents
- **AI Tools:** ChatGPT, Gemini API, GitHub Copilot
- **Tools:** Jupyter Notebook, Git, Linux, VS Code, GitHub Actions – CI/CD
- **Concepts:** Data Structures & Algorithms, OS, SDLC, OOP, DBMS, CN
- **Cloud:** AWS – EC2, IAM & S3 Basics

EXPERIENCE

Generative AI Intern – NIVUNA Labs (Sep 2025 – Mar 2026)

- Developed Python-based AI-powered applications using APIs and backend integrations.
- Worked on debugging application issues, feature improvements, and automation workflows.
- Optimized backend performance by resolving 20+ bugs, improving API response time by 35% for scalable AI-driven solutions.

PROJECTS

Smart City Assistant (Python, FastAPI, Streamlit, Google Gemini, PostgreSQL)

- Designed and developed an AI-powered backend platform for urban KPI analysis and predictive insights.
- Designed 8+ RESTful APIs for city data processing and user feedback, achieving sub-200ms response time with scalable architecture.
- Integrated Google Gemini LLM with ML forecasting models, improving predictive decision-making accuracy by 30%.

Email Spam & Fake Message Detection (Python, Scikit-learn, Pandas, NLTK)

- Built an NLP-based classification model achieving 93% accuracy in detecting spam/fake messages across 50,000+ samples.
- Performed data preprocessing, feature extraction, and model evaluation.
- Analyzed messaging patterns and optimized prediction performance using Scikit-learn models.

Task Management System (React.js, FastAPI, SQLite, Python)

- Built a full-stack task management application using React and FastAPI.
- Worked on implementing user login and signup using JWT authentication.
- Created APIs for adding, updating, and deleting tasks.

ACHIEVEMENTS

- Winner - AI/ML Technical Presentation Competition
- HackerRank - 3Star Python

CERTIFICATIONS

- AWS Certified Cloud Practitioner
- Data Analytics with Python by NPTEL – Elite
